

DBMS Assignment-1 on Table Creation in MySQL

1. Consider any database management system (like University, Library, Hospital Management System, etc.) of your choice
2. Develop Data Definition Language (DDL) and Data Manipulation Language (DML) to implement the DBMS specifying appropriate data type for each attribute
3. Create at least 5 relations/tables and insert a few tuples for each of the tables related to that system using MySQL tool
4. Put all your output screenshots in a single zip file and upload
